*Reasons for allowance*

1. This communication is in response to applicant's 08/20/2004 amendment in the application of Duschatko et al. for an "Path insertion for concatenated payloads across multiple processors" filed 06/30/2000. The proposed amendment to the claims and response have been entered and made of record. The claims have been amended to better point out and more distinctly claim subject matter comprising the invention.
4. Claims 1-16 are allowable as evident by applicant's amendment.
5. The following is an examiner's statement of reasons for allowance: The instant application is deemed to be directed to a no obvious improvement over the prior art of record. The improvement comprises: wherein a demultiplexer having a plurality of outputs, each coupled to an input of a respective pointer processor. Wherein the bidirectional terminal of each of the plurality of processors is coupled to the common node and the common node is coupled through a resistance to a voltage  $V+$ , so that in the absence of an alarm signal at all the processor inputs, the voltages at the bidirectional terminals of the processors approaches  $V+$ , and wherein as a result of an error signal at the input of any processor, the voltages at the bidirectional terminals of all the processors approach a reference voltage; wherein the alarm means comprises an error detector, a wired-OR logic element coupled between the error detector and the bidirectional terminal; and a combinational logic element having inputs respectively coupled to the output of the processor, as expressly recited in the claims.
